

Alameda-Tesla Classification Process and General Plan Project **FACTSHEET**

ALAMEDA-TESLA PLAN DESCRIPTION

California Department of Parks and Recreation (State Parks) is working to incorporate over 3,400 acres of land, known as the Alameda-Tesla Property, into the State Parks System. The Alameda-Tesla Plan is anticipated to take approximately five years to complete.

PROJECT PROCESS

The Alameda-Tesla Classification Process and General Plan Project now underway will result in a general plan that will guide future management and use of the property. The effort includes a classification, naming, general plan, and full environmental assessment and review in support of the Programmatic Environmental Impact Report (EIR) required in the general plan process.

BACKGROUND

More than two decades ago, State Parks acquired the Alameda- Tesla Property with the intent of expanding the adjacent Carnegie State Vehicular Recreation Area. After challenges to this plan, in 2021, Senate Bill 155 (PRC sec. 5090.42) authorized planning work to determine the best use of the land and specified that the property shall not be designated as a state vehicular recreation area or be considered for any future expansion of off-highway vehicle recreation.
